Global Relay Connectors

Streamline and archive your communications data for complete, actionable compliance

Connect and consolidate your critical communication data across voice, social, and collaboration tools to gain valuable insights – all while meeting regulatory requirements to ensure compliance.

Global Relay Connectors capture your business communications data at the source and store it compliantly within Global Relay Archive or your preferred archive of choice. Our extensive range of Connectors spans industry-essential trade, digital, collaboration, communication, social, email, and voice channels so you can connect to the data sources you need at the pace of innovation.

Once archived, your data is structured and enriched so you have advanced discovery and surveillance capabilities for accurate compliance monitoring and reporting. Global Relay Archive is a powerful, scalable cloud archive that seamlessly integrates with email and other electronic messaging systems to enable rapid message search, retrieval, and review.

Why Global Relay

Encrypted security

Global Relay delivers messages using TLS 1.2 transport encryption. Together with ISO 27001 / SOC 2 audited infrastructure and processes, you benefit from the performance, scale and security of private cloud, combined with the ease of access you demand. Each object is uniquely encrypted leveraging a Hardware Security Model (HSM), and stored as a business record with a sequential serial number. Using Constant Integrity Check (CIC) monitoring, Global Relay provides best-in-class security for complete peace of mind from outside threats.

Advanced AI data insights and analytics for surveillance

Global Relay uses the latest real-time Artificial Intelligence (AI) and machine learning technology to rapidly and accurately draw insights for compliance, surveillance, and eDiscovery requirements.

Intelligently unearth the most relevant conversations and operate a forensic investigation into your data with Global Relay Archive. Visualize communications data and reconstruct conversations and activity of interest.

Powerful data segregation and archiving for eDiscovery

Uniquely placed as a market leader storing over 16 petabytes of data and processing over 113 billion messages each year, Global Relay Archive is built on a scalable, highly resilient cloud architecture. Data is intricately segregated by type or by groups and can be delivered or accessed to multiple addresses or archives.

Rapidly retrieve historical data and identify, segregate, classify, and share records for audits and investigations.

Built for regulatory complete compliance

- Ideal for regulated industries with over 90% of existing customers in finance
- Over 50% of FINRA registered broker dealers use Global Relay
- Founded in 1999, with well over two decades of accountability and innovation
- Designed to meet the strict recordkeeping requirements of the most heavily regulated and litigious industries
- Comply with SEC, FINRA, CFTC, MiFID II, privacy, and other regulations
- Industry leading customer support 24x7x365 via phone, email, and web
- Continuous product upgrades and enhancements

See why 20,000+ customers worldwide trust Global Relay to drive their business forward.
